CBRIGHT™

Don't miss your photos anymore!

Positioning system for imaging
Face on a professional way

Method

Technology:

The CBright is a positioning System which can be configured for different photographic devices like, smartphones, tablets, professional Smartlens or compact cameras. All these devices can be connected to your computer or cloud to transfer photos. It integrates the best know how with laser control and ring illumination! The CBright provides you the ability to take photos within a very strict way which allows you to get reliable and reproducable before and after images as the system controls for you the positioning of the patient/vomunteer and the photographic device in a very precise way. Don't miss you photos anymore!

Positioning:

The CBright uses a unique head rest concept which center the face on a very reproducibile way. A laser line complete the setup to control the last movumnt freedom left. The photographic device can be positioned at differenet angles from 0° up to $\pm 90^\circ$ while a uniform LED illumination helps to control the color of each image independantly to the angle.

Software:

The software helps you to align the photos before acquiring them and store them automatically in your smartphone or computer. It also can edit these photo on your computer later on. Color correction can be applied later on if we get the color checker inside the image.

Ring illumination

Smartlens

Smartphone & tablet adaptor

Applications
